## Textel names proposal for JuniusX

### Unicode plane 15 characters

December 15, 2020

The names are to be used in particular with Unihistext (<https://bitbucket.org/jsbien/unihistext>). The characters themselves are to be used in particular with djview4poliqarp (<https://bitbucket.org/mrudolf/djview-poliqarp/>), which does not support OpenType features, for indexes such as <https://github.com/jsbien/Zaborowski-index4djview>.

Some principles of the naming policy:

- Comments in brackets are considered as a part of the name by Unihistext, but not necessarily in other circumstances.
- Every proper name ends in VARIANT
- Names try to follow English Unicode usage. The term *terminal* comes from (Gaskell 1976).
